Step 1 - H6 - Millers enzyme inactivation without steam

Problem hypothesis

Target customers

Flour and grain millers who need to inactivate enzymes (e.g. to stabilize flour, bran or germ) in their process.

What they want

A non-steam, electric inactivation machine that slots into an existing milling line.

Because

Steam generation means boilers, permits, piping and energy losses - heavy infrastructure a mill does not otherwise need; they want the inactivation function without installing steam.
